

SIMPLY WHITE

Surrounded by white birch, pine trees, and rolling topography, a quiet site offers filtered views of Lake Winnepesaukee's rocky shore. Once home to the Abenaki people, Lake Winnepesaukee was named after its woven structure of water among islands. The site for the residence offers a secluded retreat with filtered views through white birch and pine trees bordered by gently rolling topography that steps toward an open clearing to the rocky lakefront. Clad in white pine, a secluded family home's simple form blends with the landscape, while a wraparound deck creates an inviting space for informal family gatherings. Oversized, multislid doors establish a seamless connection between indoor and outdoor living spaces, providing natural cross-ventilation that allows the cooling lake

breeze to flow through the home. Inside, subtly textured wallcoverings, simple light fixtures, and textured materials in a minimalist palette create depth against the neutral, contemporary backdrop. The structure is designed to evolve with the homeowners. The residence honors the natural history of the land as well as the family's use of the site and home in the decades ahead. **MH+D**
